|    |   |  |  |
|----|---|--|--|
|    |   |  | <pre>mn.avg_fragmentation_in_percent [FRAG_%]  FROM sys.dm_db_index_physical_stats (null, null, null, null, null )as mn  inner join sys.tables tbl on tbl.[object_id] = mn.[object_id]  inner join sys.indexes ind on ind.[object_id] = mn.[object_id]  WHERE [database_id] = db_id(&lt;DBName&gt;)  ORDER BY mn.avg_fragmentation_in_percent DESC  GO</pre>   |
| 27 | Query<br>related to<br>io wait<br>stats<br>collection |  | <pre>SELECT DB_NAME(database_id),* FROM sys.dm_io_virtual_file_stats (2,1)  SELECT * FROM sys.dm_os_waiting_tasks  SELECT ot.waiting_task_address,  ot.session_id,  [text]  FROM sys.dm_os_waiting_tasks ot  inner join sys.dm_exec_requests er ON ot.session_id = er.session_id  cross apply sys.dm_exec_sql_text(sql_handle)  cross apply sys.dm_exec_query_plan(plan_handle)  WHERE ot.session_id &gt; 50</pre> |

## MS SQL Server DBA Troubleshooting Tips

|          |  |  |   |
|----------|--|--|---|
| 28       | Script to see the currently running code and its related analysis.       |  | <pre>SELECT wt.waiting_task_address, wt.session_id, [text]  FROM sys.dm_os_waiting_tasks OT inner join sys.dm_exec_requests er ON ot.session_id = er.session_id  cross apply sys.dm_exec_sql_text(sql_handle)  cross apply sys.dm_exec_query_plan(plan_handle)  WHERE wt.session_id &gt; 50</pre>   |
| 29.<br>a | Query to get the session related statistics including the CPU , I\O etc. |  | <pre>SELECT * FROM  sys.dm_exec_sessions WHERE is_user_process = 1  AND writes &gt; 0  For average values  SELECT AVG(cpu_time) as "CPU_Time",AVG(memory_usage) as "Memory_Usage",AVG(logical_reads) as "Logical_Reads",AVG(total_scheduled_time) as "Total_Scheduled_Time",AVG(total_elapsed_time) as "Elapsed Total Time"  FROM sys.dm_exec_sessions WHERE is_user_process = 1  AND writes &gt; 0</pre> |

## MS SQL Server DBA Troubleshooting Tips

|          |  |  |   |
|----------|--|--|---|
| 29.<br>b | Queries to get the info on query specific to a database.   |  | <ul style="list-style-type: none"><li>From query stats dmv below , pick the required sqlhandle against the required database and supply it as a parameter to the dm_exec_sql_text(sqlhandle)</li></ul> <pre>SELECT * FROM sys.dm_exec_query_stats  SELECT * FROM sys.databases  SELECT * FROM sys.dm_exec_connections  -- select * from sys.dm_exec_sql_text(sqlhandle)  SELECT * FROM sys.dm_exec_sql_text(0x0300FF7F714B96F9 27335101F39F000001000000000000000000 00000000000000000000000000000000)</pre> |
| 30       | Query to check fragmentation in all the indexes on all the tables on all the databases on an SQL Server. |  | <p>Example</p> <pre>USE master;  GO  SELECT b.name,c.name,ps.avg_fragmentation_in_percent FROM sys.dm_db_index_physical_stats  (NULL, NULL, NULL, NULL , 'DETAILED') AS PS</pre>  |

## MS SQL Server DBA Troubleshooting Tips

|    |   |  |   |
|----|---|--|---|
|    |   |  | <pre> <b>INNER JOIN</b> sys.indexes AS b <b>ON</b> ps.OBJECT_ID = b.OBJECT_ID  <b>AND</b> ps.index_id = b.index_id  <b>AND</b> ps.avg_fragmentation_in_percent &gt; 30  <b>INNER JOIN</b> sys.databases as c <b>ON</b> c.database_id = ps.database_id  <b>GO</b> </pre>   |
| 31 | Link between the table and index's master table.                                |  | <pre> EXEC sp_MSforeachdb 'USE ? select ''?' as DatabaseName, st.name as TableName,si.name as IndexName from sys.indexes si inner join sys.tables st <b>ON</b> si.object_id = st.object_id <b>WHERE</b> si.name <b>LIKE</b> '%INDEXNAME%' </pre>  |
| 32 | Solution for logical consistency based error (torn-page) in an mdf file.        |  | <pre> <b>EXEC</b> sp_resetstatus &lt;dbname&gt; ; <b>ALTER DATABASE</b> &lt;dbname&gt; SET EMERGENCY <b>DBCC CHECKDB</b> ('&lt;dbname&gt;' )  <b>ALTER DATABASE</b> &lt;dbname&gt; SINGLE_USER <b>WITH ROLLBACK</b> IMMEDIATE  <b>DBCC CHECKDB</b> ('&lt;dbname&gt;' , REPAIR_ALLOW_DATA_LOSS)  <b>ALTER DATABASE</b> yourDBname SET <b>MULTI_USER</b> </pre> |
| 33 | To check the kind of index on the corrupted page and then restore the torn page |  | <pre> <b>DBCC TRACEON</b> (3604, -1) GO <b>DBCC PAGE</b> ('yourdb', 1, 45242, 3) GO </pre> <p>Output:</p>   |

## MS SQL Server DBA Troubleshooting Tips

|    |   |  |   |
|----|---|--|---|
|    | from a backup set.  |  | <p><i>Metadata: IndexId = n</i></p> <p>If n is greater than 1 it is a non-clustered index which can be dropped and recreated. If n is 0 or 1 you have data corruption and need to perform one of the options described below.</p> <p><b>Restoring from a backup</b></p> <p>If the recovery model is FULL (or BULK_LOGGED, with some limitations), backup the tail of the log, perform a DB restore (with norecovery) from the last full backup log backups in chronological order and finally the tail of the log.</p> <p>To restore on a single bad page ,you have the option restoring only the bad pages as below:</p> <pre>RESTORE DATABASE yourdb PAGE = '1:45242'<br/>'<br/>FROM DISK = 'C:\DBpathfile.bak'<br/>WITH NORECOVERY</pre> |
| 34 | When you need to force failover to the mirrored server in case the principle is not available |  | <pre>ALTER DATABASE &lt;database_name&gt; SET<br/>PARTNER FORCE_SERVICE_ALLOW_DATA_LOSS</pre>   |

## MS SQL Server DBA Troubleshooting Tips

|    |                                       |  |   |
|----|---------------------------------------|--|---|
|    | you can issue this.                   |  |   |
| 35 | To enable mirroring on an SQL server. |  | <p>If you want to start testing database mirroring in SQL Server 2005 and later, you will need to enable a trace flag on your SQL Server 2005 instance. To do so, you will need to modify the start-up flags for the SQL Server executable and add the following option: <b>-T1400</b>. Please note that the <b>-T</b> is case sensitive and must be uppercase.</p> <p>To add this start-up option to the SQL Server 2005 executable, you can use the <b>SQL Server Configuration Manager</b> tool from the <i>Configuration Tools</i> program sub-group in the SQL Server 2005 program group, Under <i>SQL Server Services</i>, right-click on the SQL Server service you want to enable Database Mirroring on and then on the <u>Advanced</u> tab and modify the <u>Startup Parameters</u> value to add <b>-T1400</b> to the list of parameters. Make sure to separate any new parameters by a semi-colon (;). Stop and re-start your SQL Server service to enable this option.</p> <p>After doing so you will be able to configure database mirroring for any of your user databases by right-clicking on the database or by using a script.</p> |
